

INDUSTRIAL CALM

ALUMINUM SURFACES

Technical coolness · Visual balance

Aluminum evolves toward a calmer, more sophisticated expression. Controlled, matte and precise metallic surfaces convey order, quality and visual serenity.

A refined industrial language where metal becomes design.

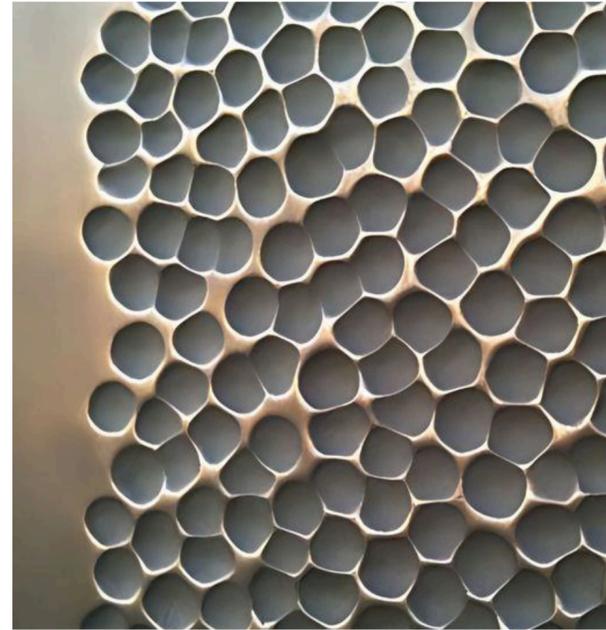

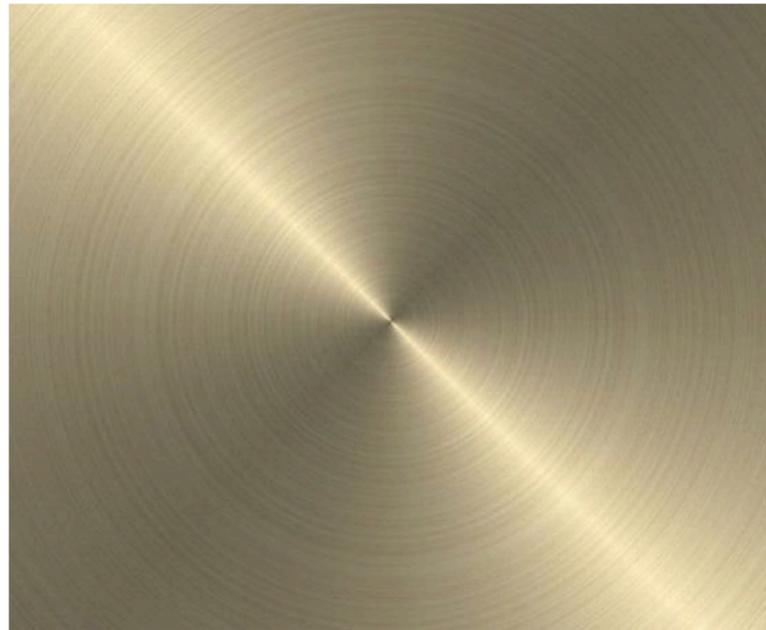

TONAL METAL

Aluminum color

Aluminum adopts a new chromatic dimension. Warm silvers, soft golds, champagne tones and deep blacks redefine metal through a premium, restrained aesthetic. Color adds depth, hierarchy and elegance while maintaining a technical, contemporary reading.

ENGINEERED TEXTURES

Designed metallic surfaces

Metal is transformed through technical patterns and graphic treatments.

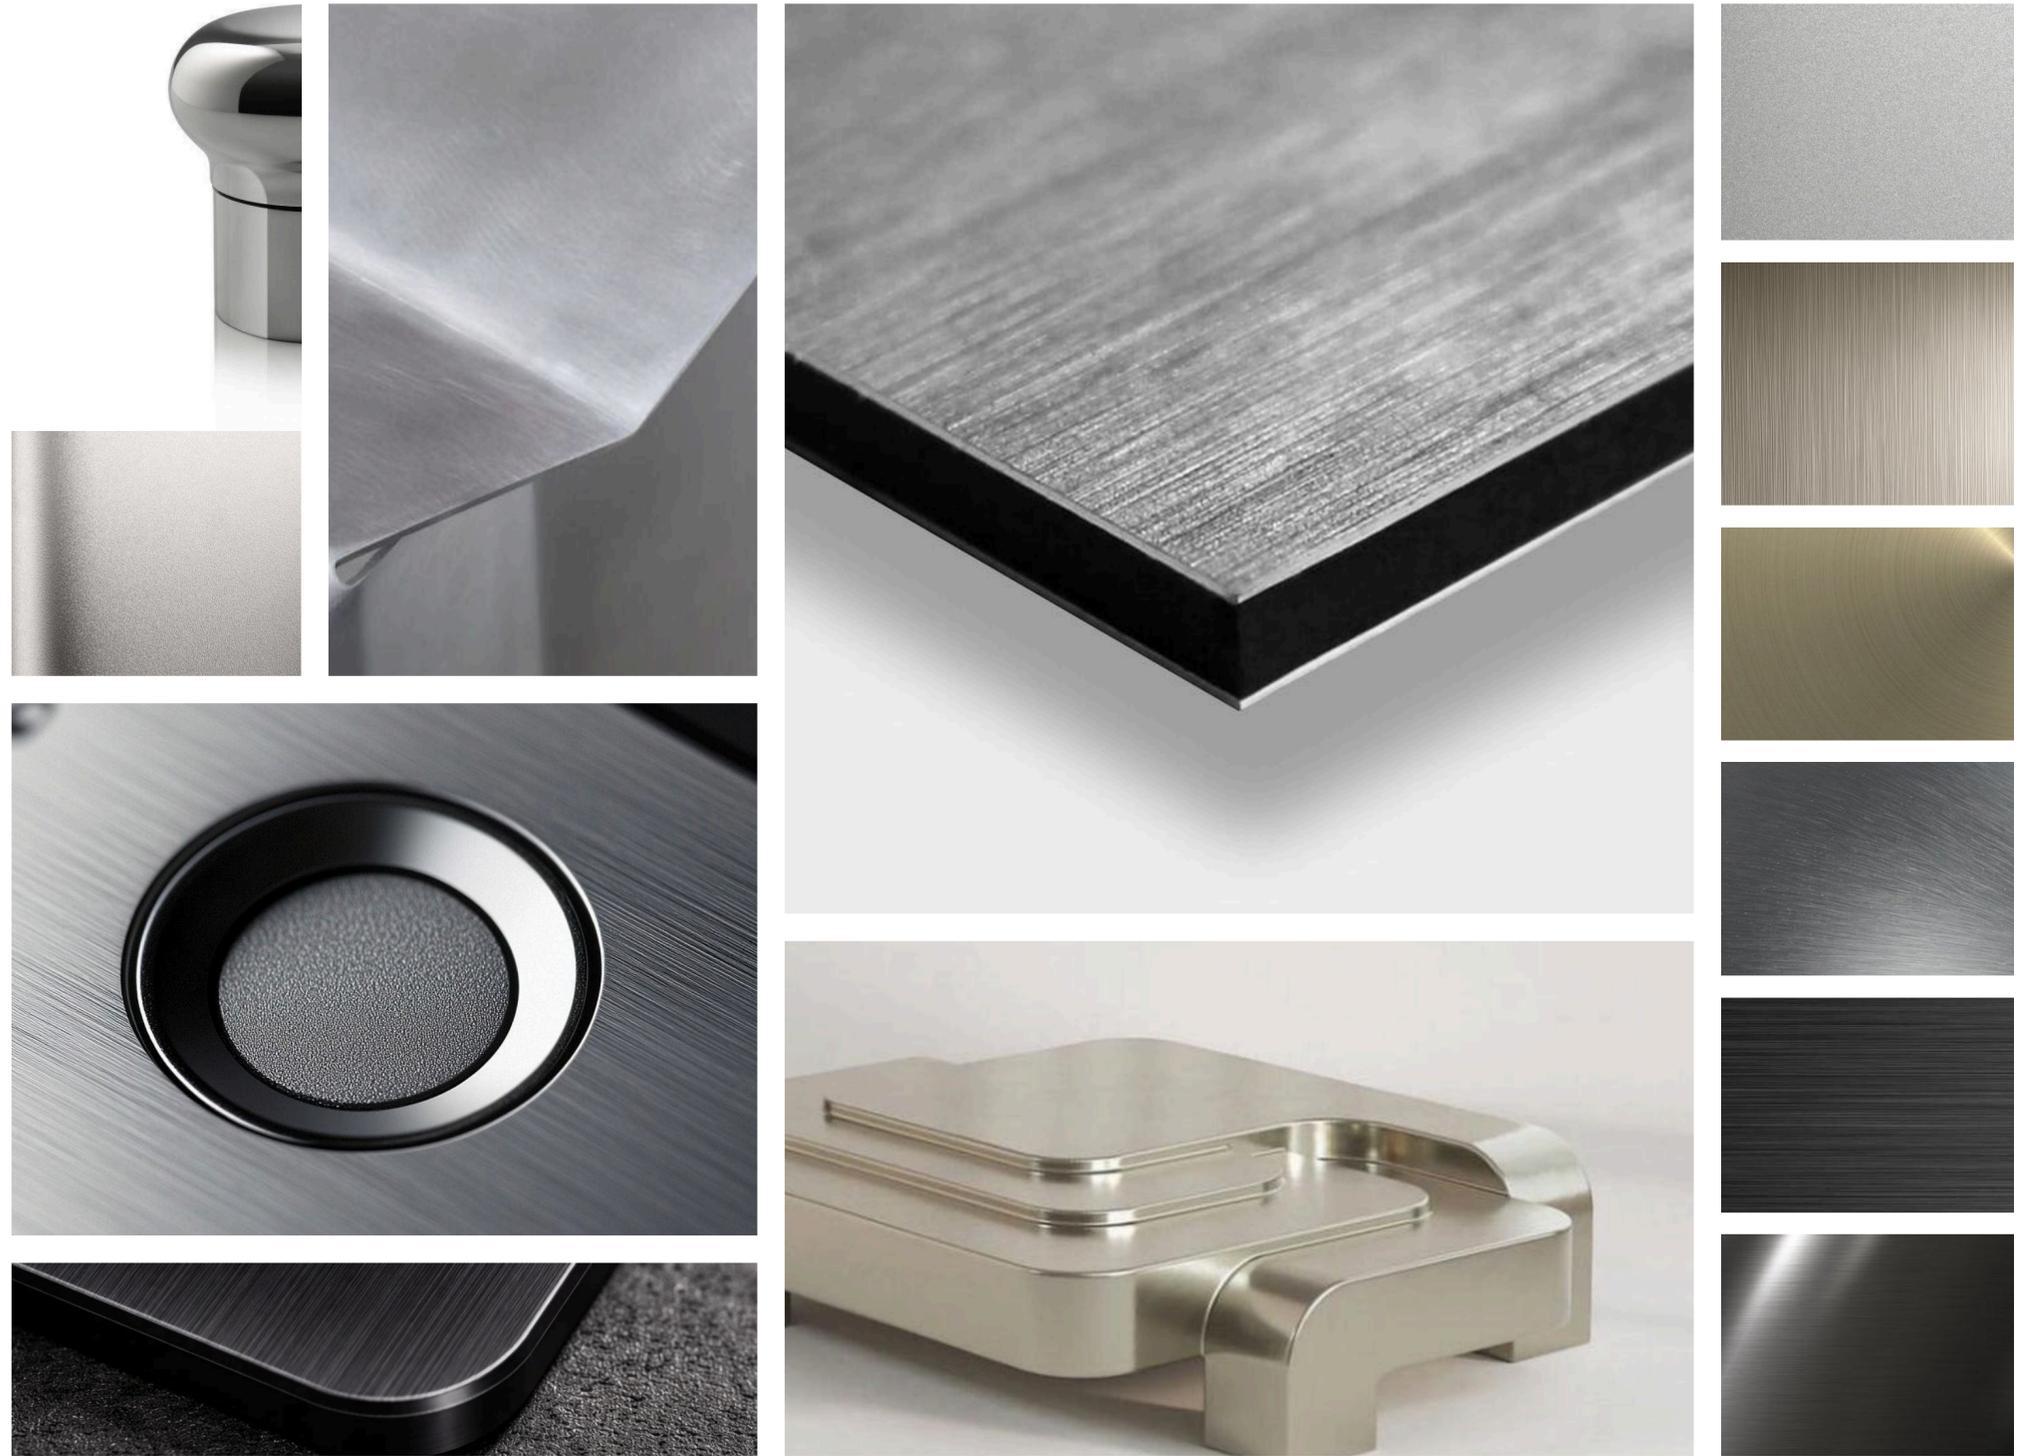

Directional brushing, circular textures, industrial rhythms and organic structures create dynamic, expressive surfaces.

A new way of understanding aluminum: beyond the standard finish, as a designed surface.
